## GCE AS/A level

## 973/01

MATHEMATICS Cl<br>Pure Mathematics<br>A.M. THURSDAY, 15 May 2008<br>$1 \frac{1}{2}$ hours

## ADDITIONAL MATERIALS

In addition to this examination paper, you will need:

- a 12 page answer book;
- a Formula Booklet.

## INSTRUCTIONS TO CANDIDATES

Answer all questions.
Sufficient working must be shown to demonstrate the mathematical method employed.
Calculators are not allowed for this paper.

## INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.
You are reminded of the necessity for good English and orderly presentation in your answers.

1. The points $A, B, C, D$ have coordinates $(-7,4),(3,-1),(6,1),(k,-15)$ respectively.
(a) Find the gradient of $A B$.
(b) Find the equation of $A B$ and simplify your answer.
(c) Find the length of $A B$.
(d) The point $E$ is the mid-point of $A B$. Find the coordinates of $E$.
(e) Given that $C D$ is perpendicular to $A B$, find the value of the constant $k$.
2. Simplify

$$
\text { (a) } \sqrt{75}-\frac{9}{\sqrt{3}}+(\sqrt{6} \times \sqrt{2}) \text {, }
$$

(b) $\frac{5 \sqrt{5}-2}{4+\sqrt{5}}$.
3. The point $P$ lies on the curve $C$ with equation $y=3 x^{2}-8 x+7$. Given that the $x$-coordinate of $P$ is 2 , find the equation of the normal to $C$ at $P$.
4. (a) Given that $y=5 x^{2}+3 x-4$, find $\frac{\mathrm{d} y}{\mathrm{~d} x}$ from first principles.
(b) Given that $y=\frac{8}{x}+3 \sqrt{x}$, find the value of $\frac{\mathrm{d} y}{\mathrm{~d} x}$ when $x=4$.
5. (a) Express $x^{2}+6 x-4$ in the form $(x+a)^{2}+b$ where the values of $a, b$ are to be determined. [2]
(b) Use your results to part (a) to find the least value of $2 x^{2}+12 x-8$ and the corresponding value of $x$.
6. Use the binomial theorem to expand $(5+2 x)^{3}$, simplifying each term of your expansion.
7. The polynomial $4 x^{3}+p x^{2}-11 x+q$ has $x-2$ as a factor. When the polynomial is divided by $x+1$, the remainder is 9 .
(a) Show that $p=-4$ and $q=6$.
(b) Factorise $4 x^{3}-4 x^{2}-11 x+6$.
8. The diagram shows a sketch of the graph of $y=f(x)$. The graph has a maximum point at $(3,4)$ and intersects the $x$-axis at the points $(-1,0)$ and $(7,0)$ and the $y$-axis at the point $(0,2)$.

(a) Sketch the graph of $y=f(x+2)$, indicating the coordinates of the stationary point and the coordinates of the points of intersection of the graph with the $x$-axis.
(b) Sketch the graph of $y=f(x)+3$, indicating the coordinates of the stationary point and the coordinates of the point of intersection of the graph with the $y$-axis.
9. The curve $C$ has equation

$$
\begin{equation*}
y=-2 x^{3}+3 x^{2}+12 x-5 \tag{7}
\end{equation*}
$$

Find the coordinates and nature of each of the stationary points of $C$.
10. (a) Solve the inequality $2 x^{2}-3 x-9 \geqslant 0$.
(b) (i) Find the range of values of $m$ for which the quadratic equation

$$
3 x^{2}-6 x+m=0
$$

has no real roots.
(ii) The curve $C$ has equation $y=3 x^{2}-4 x+7$. The line $L$ has equation $y=2 x+k$, where $k$ is a constant. Given that $L$ and $C$ do not intersect, find the range of possible values of $k$.
