## GCE AS/A level

## 978/01

# MATHEMATICS FP2 <br> Further Pure Mathematics 

P.M. FRIDAY, 19 June 2009<br>$1 \frac{1}{2}$ hours

## ADDITIONAL MATERIALS

In addition to this examination paper, you will need:

- a 12 page answer book;
- a Formula Booklet;
- a calculator.

## INSTRUCTIONS TO CANDIDATES

Answer all questions.
Sufficient working must be shown to demonstrate the mathematical method employed.

## INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.
You are reminded of the necessity for good English and orderly presentation in your answers.

1. The functions $f, g$ and $h$ are defined as follows:

$$
\begin{align*}
& f(x)=\sin x \\
& g(x)=|x| \\
& h(x)=\frac{1}{x} \tag{2}
\end{align*}
$$

(a) State, with a reason, which one of the above functions is not continuous.
(b) State, with a reason, whether
(i) $g$ is even or odd,
(ii) $h$ is even or odd.
2. Using the substitution $u=\tan x$, evaluate the integral

$$
\int_{0}^{\frac{\pi}{6}} \frac{\sec ^{2} x}{\sqrt{3-\sec ^{2} x}} \mathrm{~d} x
$$

Explain briefly why the integral could not be evaluated if the upper limit were changed to $\frac{\pi}{3}$.
3. Giving your answers in the form $r(\cos \theta+\operatorname{isin} \theta)$, find the fourth roots of the complex number $-8+8 \sqrt{3} \mathrm{i}$.
4. Find the general solution to the equation

$$
\begin{equation*}
\sin \theta+\sin 2 \theta+\sin 3 \theta=0 \tag{7}
\end{equation*}
$$

5. The function $f$ is defined by

$$
f(x)=\frac{1}{(x+1)(x+2)(x+3)} .
$$

(a) Express $f(x)$ in partial fractions.
(b) Evaluate the integral

$$
\begin{equation*}
\int_{0}^{5} f(x) \mathrm{d} x \tag{5}
\end{equation*}
$$

giving your answer in the form $\ln \left(\frac{m}{n}\right)$ where $m, n$ are integers.
6. $\quad$ The ellipse $E$ has equation

$$
\frac{x^{2}}{a^{2}}+\frac{y^{2}}{b^{2}}=1 .
$$

(a) Show that the equation of the tangent to $E$ at the point $(a \cos \theta, b \sin \theta)$ is

$$
\begin{equation*}
b x \cos \theta+a y \sin \theta=a b . \tag{5}
\end{equation*}
$$

(b) This tangent meets the coordinate axes at $P$ and $Q$, and the mid-point of $P Q$ is $R$. Find the Cartesian equation of the locus of $R$ as $\theta$ varies.
7. (a) Given that

$$
z=\cos \theta+\operatorname{isin} \theta
$$

show that

$$
\begin{equation*}
z^{n}+z^{-n}=2 \cos n \theta \tag{3}
\end{equation*}
$$

(b) Hence solve the equation

$$
\begin{equation*}
z^{2}-2 z+3-2 z^{-1}+z^{-2}=0 \tag{7}
\end{equation*}
$$

8. The function $f$ is defined by

$$
f(x)=\frac{x(x+3)}{x-1} .
$$

(a) Show that $f(x)$ can be written in the form

$$
a x+b+\frac{c}{x-1}
$$

where $a, b, c$ are constants to be found.
(b) Find the coordinates of the stationary points on the graph of $f$.
(c) State the equation of each of the asymptotes on the graph of $f$ and sketch the graph of $f$.
(d) Find $f^{-1}(A)$, where $A$ is the interval $[0,10]$.
